Mid season drought (long dry spell)	Major Farming situation	Crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation
At reproductive stage	NA				

Condition			Su	ggested Contingency measu	res
Terminal drought	Major Farming situation	Crop/cropping system	Crop management	Rabi crop planning	Remarks on Implementation
	NA				

2.1.2 Irrigated situation

Condition			Suggested Contingency measures				
	Major	Normal	Change in	Agronomic measures	Remarks on		
	Farming	Crop/cropping	crop/cropping		Implementation		
	situation	system	system		_		
Delayed/	Sandy	Pearlmillet-wheat	Pearlmillet-Raya	10-15% higher seed rate, optimum plant spacing	Seeds from State,		
limited release	soils/sandy			Sprinkler irrigation, Planting on beds, planting with ridger	national seed and		
of water in	loam soils			seeder, Laser land leveling,	private seed agencies.		
canals due to	tubewell			Conjunctive use of canal and ground waters.	The schemes of		
low rainfall	irrigated			Split application of fertilizer, Application of organic manures,	NREGS, RKRY,		

Condition					
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
				Straw mulching, Limited ground water use, prefer life saving irrigation Short duration cultivars, Adoption of plant protection measures, soaking of seeds before sowing, seed treatment with biofertilizer, deep ploughing during <i>kharif</i> season Shallow irrigation of 4-5 cm depth, weed free environment	NFSM, NHM are in operation. Govt. subsidy on sprinkler, drip irrigation systems and laser leveler
		Pearlmillet- chickpea	Clusterbean-barley	As above	
		Fallow -raya	Summer moong- raya	Short duration cultivars Seed treatment with azotobactor/rhizobium Straw mulching Sprinkler irrigation Planting on beds, planting with ridger seeder Laser land leveling, Conjunctive use of canal and ground waters. Limited ground water use, prefer life saving irrigation Weed free environment	
		Sorghum-barley	Cucurbeets-Raya	Sprinkler irrigation Planting on beds, planting with ridger seeder Laser land leveling, Conjunctive use of canal and ground waters. Split application of fertilizer Straw mulching Limited ground water use, prefer life saving irrigation Seed treatment with azotobactor Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment	
	Well drained, medium alluvial	Clusterbean-wheat	Cotton-wheat	Drip/furrow irrigation in cotton, paired row planting Sprinkler in wheat Planting on beds Straw mulching in cotton	Shallow ground water use alone or in combination. Seeds from State,

Condition				Suggested Contingency measures	
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
	soils, canal and tubewell irrigated			Planting on beds Planting with ridger seeder Laser land leveling Split application of fertilizer Straw mulching in sugarcane Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars Soaking of wheat seeds before sowing Seed treatment with azotobactor/rhizobium Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Sowing of vegetable seeds in polythene bags and replanting them in holes. Weed free environment	national and private seed agencies seed agencies, The schemes of NREGS, RKRY, NFSM, NHM are in operation. Govt. subsidy on sprinkler and drip irrigation systems, on laser land leveling
		Pearlmillet/-wheat	Pearlmillet- raya/chickpea	Paired row planting Sprinkler irrigation Planting on beds Straw mulching Laser land leveling Split application of fertilizer Straw mulching Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars Seed treatment with azotobactor/rhizobium Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment	
		Sugarcane-wheat	Sugarcane-moong intercropping	Drip/furrow irrigation in sugarcane, paired row planting Planting on beds Straw mulching in sugarcane Laser land leveling	

Condition				Suggested Contingency measures	
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
				Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars Weed free environment Weed free environment	
		Pearlmillet/fallow-raya	Vegetables	furrow irrigation in pearlmillet/raya, paired row planting Planting on beds Straw mulching Laser land leveling Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars Seed treatment with azotobactor Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Sowing of vegetable seeds in polythene bags and replanting them in holes. Weed free environment	
	Clay soils, canal and tubewell	Rice-wheat	Summer moong-rice	Sprinkler irrigation in moong, Planting on beds Laser land leveling	Late sown cultivars Short duration Desi wheat and Basmati
	irrigated	Sugarcane-wheat	Sugarcane-onion intercropping	Drip irrigation in paired row planting of sugarcane Laser land leveling Straw mulching in sugarcane	rice. Shallow ground water use alone or in combination.
		Sorghum fodder- wheat	Vegetables/ flowers	Sprinkler/drip irrigation, Planting on beds, laser land leveling Mulching on inter-row spacing Limited ground water use, prefer life saving irrigation	Conservation of rain water, mulching, rain water harvesting Seeds from State and national seed

Condition			Suggested Contingency measures		
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
					agencies, The schemes of NREGS, RKRY, NFSM, NHM are in operation. Seed from private seed agencies

Condition			Suggested Contingency measures			
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation	
Non release of water in canals under delayed onset of monsoon in catchment	Sandy soils, tubewell irrigated	Pearlmillet-Raya	Pulses-raya	Planting on beds Sprinkler irrigation Marginal ground waters for life saving irrigation Laser land leveling Straw mulching Paired row planting Split application of fertilizer Straw mulching Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars Seed treatment with azotobactor/rhizobium Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment	Short duration cultivars of crops Shallow ground water use alone or in combination. Conservation of rain water, mulching, rain water harvesting. Shallow ground water use alone or in combination. Conservation of rain water, mulching, rain water harvesting.	
		Pearlmillet- chickpea	Clusterbean-Barley	Sprinkler irrigation Planting on beds Straw mulching Laser land leveling Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars		

Condition			Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation		
				Seed treatment with azotobactor Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment			
		Fallow – raya/barley	Vegetables-raya	Sowing of vegetable seeds in polythene bags and replanting them in holes. Drip irrigation in vegetables Planting on beds Straw mulching Laser land leveling Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Seed treatment with azotobactor Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment			
	Well drained, medium alluvial soils, canal and tubewell irrigated	Clusterbean- Barley	Cotton-wheat	Drip/furrow irrigation in cotton Sprinkler in wheat Planting on beds Laser land leveling Limited ground water use, prefer life saving irrigation Conjunctive use of ground water Shallow irrigation of 4-5 cm depth Weed free environment	Short duration cultivars of crops Shallow ground water use alone or in combination. Conservation of rain water, mulching, rain		
		Pearlmillet/fallow-wheat	Pearlmillet- raya/chickpea	Paired row planting Sprinkler irrigation Planting on beds Straw mulching Laser land leveling Split application of fertilizer Straw mulching Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars	water harvesting. Shallow ground water use alone or in combination. Conservation of rain water, mulching, rain water harvesting		

Condition			Suggested Contingency measures				
	Major Farming situation	Normal Crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation		
				Seed treatment with azotobactor/rhizobium Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment			
		Pearlmillet/fallow-raya	Sugarcane–moong intercropping	Drip/furrow irrigation in sugarcane, paired row planting Planting on beds Straw mulching in sugarcane Laser land leveling Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Short duration cultivars, Weed free environment			
		Sorghum -wheat	Vegetables	Sowing of vegetable seeds in polythene bags and replanting them in holes. Drip irrigation in vegetables Planting on beds Straw mulching Laser land leveling Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters Seed treatment with azotobactor Deep ploughing during kharif season Shallow irrigation of 4-5 cm depth Weed free environment			
	Clay soils, canal and tubewell irrigated	Pigeon pea – wheat/barley Fallowraya	Summer moong- wheat Sugarcane- mungbean intercropping	Drip/furrow irrigation in sugarcane, paired row planting Planting on beds Straw mulching in sugarcane Laser land leveling Split application of fertilizer Limited ground water use, prefer life saving irrigation Conjunctive use of brackish ground waters with canal waters	Short duration cultivars of crops Shallow ground water use alone or in combination. Conservation of rain water, mulching, rain water harvesting. Shallow ground water		

Condition			Suggested Contingency measures

2.2 Un-timely (unseasonal) rains

Condition	Suggested contingency measure						
Continuous high rainfall in	Vegetative stage	Flowering stage	Crop maturity stage	Post harvest			
a short span leading to							
Rice	Drainage, if depth of standing water is > 5-6 cm	Drainage	Drainage	Shifting to dry place			
Sugarcane	Do-	Do-	Do-	-			
Cotton	Do-	Do-	Do-	Shifting to dry place			
Pearlmillet	Do-	Do-	Do-	Do-			
Sorghum (fodder)	Do-	Do-	Do-	Do-			
Horticulture							
Cauliflower, Cabbage, Raddish and Carrot	 No adverse effect Removal of unwanted sprouts Spray insecticides & pesticides to control the insect & pest Drain out water if heavy rains 	 Drain out the excess water to avoid flower and fruit drop To control the fruit drop apply foliar application of nutrients and growth regulators Apply insecticide & pesticides to control the insect & pest and diseases on young developing fruits Plough the field to increase the root aeration. 	Harvest the fruit crops timely and send to the market immediately.	 Apply fungicide to avoid post harvest diseases. Proper covering of the produce. Proper grading and cleaning of fruits immediately after harvest. Use the damaged fruits for processing Use water proof packaging 			
Heavy rainfall with high speed winds in a short span ²							
Rice	Drainage, if stagnant water	Drainage	Drainage	Shifting to dry place			
Sugarcane	-do-	-do-	-do-	-do-			
Cotton	-do-	-do-	-do-	-do-			
Pearlmillet	-do-	-do-	-do-	-do-			
Sorghum (fodder)	-do-	-do-	-do-	-do-			
Horticulture							
Cauliflower, Cabbage, Raddish and Carrot	Drain out water if heavy rains	 Drain out the excess water to avoid flower and fruit drop To control the fruit drop apply foliar application of nutrients and growth regulators Apply insecticide & pesticides to control the insect & pest and 	Harvest the fruit crops timely and send to the market immediately.	 Apply fungicide to avoid post harvest diseases. Proper covering of the produce. Proper grading and cleaning of fruits immediately after harvest. 			

Outbreak of pests and diseases due to unseasonal rains		diseases on young developing fruits 4. Plough the field to increase the root aeration.	4. Use the damaged fruits for processing5. Use water proof packaging
Rice: Bacterial leaf blight, blast disease and false smut increases due to rains	Soak 10 kg of seed in 10 lt. water suspension of Emisan / Bavistin 10 gm +1 g Streptocycline for 24 hrs. before sowing. No recommendation at vegetative stage for BLB control	Follow recommended control measures	
Wheat: Yellow and brown rust of wheat become severe Powdery mildew intensity becomes low to moderate Karnal bunt increases	Spray 600 – 800 gm Mancozeb 200 lt. of water/acre at the appearance of disease and repeat after 15-20 days For powdery mildew control spray 600-800 gm wettable sulphur/200 lt. of water/acre		
Sugarcane: Red rot becomes severe due to heavy rains	Use disease free setts treated with Emisan containing 6% mercury (Hg) for 4-5 min. or hot steam treated disease free setts		

2.3 Floods

Condition	Suggested contingency measure						
Transient water	Seedling / nursery stage	Vegetative stage	Reproductive stage	At harvest

2.5 Contingent strategies for Livestock, Poultry & Fisheries

2.5.1 Livestock

	Suggested contingency measures				
	Before the event	During the event	After the event		
Prought Feed and fodder availability	 All Districts should be asked to locate their feed and fodder banks in view of submergence situation arising due to draught. Sufficient care must be taken to sensitize the farmers to protect their feed and fodder much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time. Complete feed blocks should be prepared and stored in the feed banks for scarcity periods. The livestock holders of small ruminants should be educated/ informed to collect sufficient amount of green leaves from edible plants for use during the period of submergence at the earliest, after receipt of draught warning. The district authorities of Animal Husbandry Department should chalk out a complete programme to cater the feed & fodder needs of livestock. Increase the sown area under fodder crops Looking to scarcity of crop residues, burning of paddy straw and stubbles should not be allowed in Haryana. This can be properly harvested, baled, densified and fortified using 4% urea with molasses and transported to areas of fodder scarcity. Standardized machinery for harvesting, bailing, densification and fortification is available with Punjab Agro Federation and in the market. 	transported from other districts should also be established adjacent to these camps. 3. Complete feed blocks stored in the feed banks should be provided to productive, lactating and pregnant animals for scarcity periods 4. Since stall feeding adversely affects the breeding efficiency in case of sheep, therefore, sheep should always be resorted to natural grazing. 5. Special care is required for productive, lactating and pregnant animals. These animals must be supplemented with additional concentrates and fodders.	1. Immediate efforts are needed to grow fodder crops like oats, barley, kasni and lucern etc. in the canal command areas. 2. Farmers might have to be compensated for abandoning food or commercial cash crop to meet contingent fodder requirements.		
Drinking water	Prior to the onset of summer all the water ponds/lakes in the villages/cities should be filled up with canal water/tube wells.	1. All the affected livestock should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned	Normal supply of water should be restored.		

	Suggested contingency measures			
	Before the event	During the event	After the event	
		Government functionaries of the Districts. 2. Resorting to alternate day watering to camel, sheep and goats. Experimental evidences show that even watering twice a week did not have much adverse effect on body weight of the sheep. 3. Avoiding long distance grazing, as tired animals need more and frequent watering and feeding.		
Health and	Constitution of task force at district and sub division level which will	Disbursement of supplements, treatment of	Rehabilitation of	
disease management	formulate guidelines for action should have a mobile veterinary unit at their disposal. Floods				
Feed and fodder availability	 All Districts should be asked to locate their feed and fodder banks in view of submergence situation arising due to floods. Sufficient care must be taken to sensitize the farmers to protect their feed and fodder much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time. Complete feed blocks should be prepared and stored in the feed banks for scarcity periods The livestock holders of small ruminants should be educated/informed to collect sufficient amount of green leaves from edible plants for use during the period of submergence at the earliest, after receipt of draught warning. The district authorities of Animal Husbandry Department chalk out a complete programme to cater the feed & fodder needs of cattle, buffalo, sheep, goat, pig, dog, poultry birds etc. The livestock holders of livestockare trained regarding shifting 	 The best option is to open fodder depots for milch animals which farmers will never deposit into the cattle camps and establish cattle camps for dry and scrub animals. These camps should be established along assured source of water or canals for drinking and growing fodder. Facilities like storing densified roughages transported from other parts of the country should also be established adjacent to these camps. Immediate efforts are needed to grow fodder crops like oats, barley, kasni and lucern etc. in the canal command areas. Farmers might have to be compensated for abandoning food or commercial cash crops to meet contingent fodder requirements. Since stall feeding adversely affects the breeding efficiency in case of sheep, 	needed to grow fodder crops like oats, barley, <i>kasni</i> and <i>lucern</i> etc. in the canal command areas. 2. Farmers might have to be compensated for abandoning food or commercial cash crops to meet contingent fodder requirements.

	Before the event	During the event	After the event	
	of animals before flooding. The farmers are instructed to let loose their animals instead of tieing much before flood. 5. Increase the sown area under fodder crops 6. Looking to scarcity of crop residues, burning of paddy straw and stubbles should not be allowed in Haryana. This can be properly harvested, bailed, densified and fortified using 4% urea with molasses and transported to areas of fodder scarcity. Standardized machinery for harvesting, bailing, densification and fortification is available with Punjab Agro Federation and in the market.	therefore, sheep should always be resorted to natural grazing. 6. Special care is required for productive, lactating and pregnant animals. These animals must be supplemented with additional concentrates and fodders. 7. Most of such animals will be retained by the farmers and arrangements for fodder, feed and drinking water should be made accordingly.	introduced gradually.	
Drinking water	Tube wells should be installed before monsoon to provide underground water to the livestock during flood period.	All the affected livestock and poultry should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned Government functionaries of the Districts. The available water may be chlorinated if required with help of Halogen Tablet prior to drinking by livestock and poultry.	Normal supply of water should be restored.	
Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action. Procurement of mineral and feed supplements, life saving drugs, electrolytes, vaccines etc. Workout places for evacuation.	Evacuate to safe places, provide veterinary aid to affected animals, proper disposal of dead animals, disainfection of drinking water. If not already done, carry out deworming and vaccinations for HS, FMD, BQ in cattle, PPR, sheep pox, ET in sheep and goats, swine fever in pigs.	Rehabilitation of affected animals, provision of veterinary aid and follow up, provide supplements etc. Disinfection of area, control of vectors, prevention of spread of disease/outbreaks. Treatment of affected animals.

2.5.2 Poultry

	Suggested continge	ncy measures		
	Before the event	During the event	After the event	
Drought				
Shortage of feed ingredients	I. All Districts should be asked to locate their feed banks in view of submergence situation arising due to draught. Sufficient care must be taken to sensitize the farmers to protect their feed and fodder much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time. II. The district authorities of Animal Husbandry Department should chalk out a complete programme to cater to feed the poultry birds.	Poultry farmers should be provided with sufficient amount of feed ingredients and complete feed during draught situation from the feed banks.	Normal feeding should be restored	
Drinking water	Necessary arrangement for water storage should be made. Hand pumps should be installed around the sheds. Sufficient quantity of electrolytes should be ensured.	All the affected poultry should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned Government functionaries of the Districts.	Normal drinking water restored	

Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action should have a mobile veterinary unit at their disposal. Commercial poultry farms can procure grain/feed in advance.	In backyard birds, put some grains and sufficient water inside the enclosure, provide some vitamin supplement.	In backyard poultry, carry out deworming and vaccination for Ranikhet disease and Gumboro. Provide vitamins and mineral supplement.
Floods			
Shortage of feed ingredients	I. All Districts should be asked to locate their feed banks in view of submergence situation arising due to flood. Sufficient care must be taken to sensitize the farmers to protect their feed much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time. II. The poultry farmers should be trained regarding shifting of birds before flood. For shifting of poultry birds to safer places, the farmer should be educated to make suitable cages from bamboos.	Sufficient quantity of feeds stored in the feed banks should be made available to the poultry farmers.	Normal feeding should be restored
Drinking water	I. Prior to the onset of monsoon tube wells should be installed in the villages and near to the poultry farms so as to provide underground water during flood.	All the affected poultry should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned Government functionaries of the Districts. The available water may be chlorinated if required with help of Halogen Tablet prior to drinking by livestock and poultry.	Normal drinking water restored
Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action should have a mobile veterinary unit at their disposal. Make provision of shelter for evacuation and arrangement around farm so that flood water does not enter poultry farm/shed. Provision or facilities for disposal of dead birds.	Evacuate the birds to safer places. Carry out deworming and vaccinations. May dispose off/sell birds for meat purpose. Proper disposal of dead birds.	Make the shed dry, sprinkle lime and spray insecticides and disinfectant before placement of birds, use of coccidiostat in feed or water, and proper disposal of

			dead birds.	
Cyclone	-NA-			
Shortage of feed ingredients Drinking water				
Health and disease management	Keep arrangements in place in shed for heating during winter/cold waves and for cooling by use of sprinklers/foggers. Procure electrolytes and supplements.	Avoid too much fluctuation below the temperature of 70 °F and above 100 °F. Use bukharies, gas burner, secure curtains during winter. Provide a course of antibiotics in feed or water for 3-5 days to combat respiratory problems. Provide vitamin C, electrolyte in drinking water during heat waves and use of foggers, wetting of curtains, sprinkling of water etc. during heat waves. May dispose off/sell birds if heavy mortality occurring.	Treatment of affected birds, vaccination if delayed may be carried out as per schedule.	
Heat wave and cold wave				
Shelter/environment management	Necessary arrangement of tatties, gunny bags and tirpal should be made available so as to cover the sheds during heat and cold waves	Window of the sheds should be covered with gunny bags, tatties, and tirpal. Electric fans should be provided in the sheds and if possible desert cooler should be provided during heat period. High energy and readily available sources of energy nutrients may be provided in the ration.	Normal shelter should be restored	
Health and disease management				

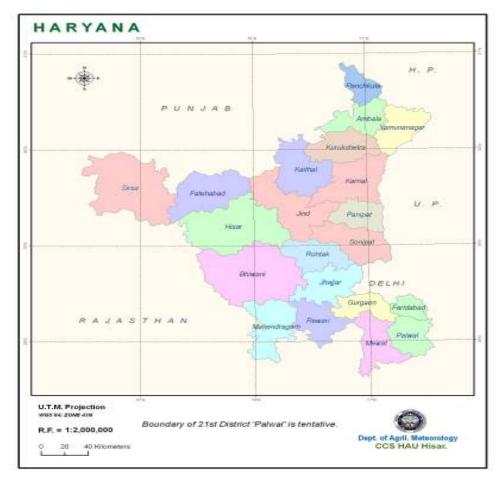

2.5.3 Fisheries

	Suggested contingency measures				
	Before the event	During the event	After the event		
1) Drought					
A. Capture					

Marine			
Inland			
(i) Shallow water depth due to insufficient rains/inflow			
(ii) Changes in water quality			
(iii) Any other			
B. Aquaculture			
(i) Shallow water in ponds due to insufficient rains/inflow	Further increase the depth of ponds, store the fish stock in 1 & 2 ponds only.	Sell the big fishes and keep the smaller fishes in one tank.	Stock the young fishes in different tanks, species wise.
(ii) Impact of salt load build up in ponds / change in water quality	Continuously add some water from tube well/water source in fish ponds	Do not allow the water level to go below 3.5 feet in fish ponds.	Stock the young fishes in different tanks and keep the water between 3.5 and 6.0 feet.
(iii) Any other			
2) Floods			
A. Capture			
Marine			
Inland			
(i) No. of boats / nets/damaged			
(ii) No.of houses damaged			
(iii) Loss of stock			
(iv) Changes in water quality			
(v) Health and diseases			
B. Aquaculture			
(i) Inundation with flood water	Boundaries/Bundhs with height >6 feet may be made around fish ponds, will restrict, escape of fishes from ponds	Netout and stock the fishes in one big tanks and make the bundh >6 feet height around the ponds.	Remove the bundh separately and release the fishes, species-wise in tanks.

(ii) Water contamination and changes in water quality	Add more fresh water in each tank (tube well/canal), grow aquatic weeds.	Repeatedly filter and recirculate water from stocking tanks	Filter, recirculate and add new fresh water every week, will decrease fish mortality.
(iii) Health and diseases	Treat the pond water with KmNO ₄ @ 10 ppm in each fish tanks. Add new fresh water periodically.	Disinfect fish ponds with KmNO ₄ @ 10g/10,000 liter water fortnightly.	Treatment with KmNO ₄ must continue for one month even after flood situation is out. Remove the highly infected fishes from ponds.
(iv) Loss of stock and inputs (feed, chemicals etc)	Store the inputs at safer places.	Move stock and inputs to safer places and acquire fresh stock in shortage.	Retain the normal arrangements.
(v) Infrastructure damage (pumps, aerators, huts etc)	Make alternate arrangements according to the anticipated conditions	Proper maintenance/repairing of damaged infrastructure or make new arrangements.	Proper maintenance/repairing of damaged infrastructure.
(vi) Any other			
3. Cyclone / Tsunami			
A. Capture			
Marine			
(i) Average compensation paid due to loss of fishermen lives			
(ii) Avg. no. of boats / nets/damaged			
(iii) Avg. no. of houses damaged			
Inland			
B. Aquaculture			
(i) Overflow / flooding of ponds			
(ii) Changes in water quality (fresh water / brackish water ratio)			
(iii) Health and diseases			
(iv) Loss of stock and inputs (feed, chemicals etc)			

(v) Infrastructure damage (pumps, aerators, shelters/huts etc)			
(vi) Any other			
4. Heat wave and cold wave			
A. Capture			
Marine			
Inland			
B. Aquaculture			
(i) Changes in pond environment (water quality)	Keep the ponds water fresh by adding fresh tubewell water, regularly.	Showering the water in air and add fresh tube-well water, periodically.	During heat waves, showering is must and also tubewell water. In winter continue adding of tubewell water with KmNO ₄ .
(ii) Health and Disease management	Treatment of KmNO4 @ 10 ppm. Sale out the bigger fishes.	Treatment of KmNO4 @ 10 ppm. Dump the fishes which were heavily infected	Disinfection with KmNO ₄ continues. Sale out all the fishes except, infected ones. Dump the infected fishes in a ditch in the ground.
(iii) Any other			

Annexure 2

Mean Annual rainfall
